This is a model risk assessment based on initial Government guidelines on COVID-19 and remains subject to change at short notice as updates are received from the Department for Education (DfE) or Birmingham City Council (BCC). **Schools will amend according to individual context.**

Risk assessment is about identifying reasonably practicable measures to control the risks in a workplace or when undertaking an activity. The process evaluates the threats and risks of a specified issue/situation and enables the likelihood that somebody could be harmed, together with an indication of how serious the harm could be, to be considered.

**Likelihood** - For each issue/situation, determine the likelihood it will occur.

**Severity (outcome)** - determine the potential injury/health.

Likelihood	Severity
4 = Certain = common or frequent occurrence	4 = Major risk - death, loss of limbs, etc
3 = Probable = likely to occur sometime	3 = High risk - broken bones, burns, etc
2 = Possible = may occur sometime	2 = Moderate risk - cuts, bruises, sickness, etc.
1 = Improbable = unlikely to occur	1 = Minimal risk - strain, shaken, no injury, etc

The matrix (below) to determine the the Likelihood and Severity being independently scored and plotted.

provides a method level of risk, with

RISK LEVEL MATRIX					
PROBABILITY (LIKELIHOOD)	4	Low	High	Very High	Very High
	3	Low	Med	High	Very High
	2	Low	Low	Med	High
	1	Low	Low	Low	Low
		1	2	3	4

This is a model risk assessment based on initial Government guidelines on COVID-19 and remains subject to change at short notice as updates are received from the Department for Education (DfE) or Birmingham City Council (BCC). **Schools will amend according to individual context.**

	SEVERITY (OUTCOME)
--	--------------------

Once the likelihood and severity of the risk have been assessed they are plotted on the risk profiling grid above and the risk rating defined e.g. If a risk has a likelihood of 3 – Likely and a severity of 1 – Minimal, the risk rating will be 3 x 1 = 3. This would mean the risk is low and arrangement would be adequate. Example as follows:

Issue/Area to be addressed (Potential Hazard)	Current Control Measures Good Practice Control Measures Adopted	In place (Yes/No)	Further action/ Comments	Final Risk Rating
<p><b>Example:</b> <b>Slips, trips and falls</b> <i>There are smooth surfaces and tripping hazards around the school site with the potential to cause persons to fall over injuring themselves with multiple injuries.</i></p>	<ul style="list-style-type: none"> <li>• <i>Cleaning regime in place.</i></li> <li>• <i>Correct safe substance used for surfaces.</i></li> <li>• <i>Signage available.</i></li> <li>• <i>Cleaners have received training.</i></li> <li>• <i>Introduce hazard reporting system and ensure that staff are aware of school H&amp;S Policy.</i></li> <li>• <i>Undertake specific risk assessment on snow and ice.</i></li> <li>• <i>Remove all trailing cables in admin office.</i></li> </ul>	Y	Review arrangements for new staff i.e. ensure the H&S policy to shared /communicated	<b>3x1=3</b> <b>Low</b>

The risk of death is also higher in older people over 65yrs and men have a slightly higher rate than women. - In line with this, transport authorities will be looking to ensure that children are able to safely walk, cycle or scoot to school where possible. Indeed, in normal times, transport authorities invest considerable resources in promoting mode shift for school transport and in supporting and training children to travel safely and sustainably.

The need to encourage children to walk, cycle or scoot to school sitting alongside the risks posed by a rise in speeding and other dangerous driving on empty roads. <http://www.urbantransportgroup.org/resources/types/briefings/transport-challenges-return-schools-and-colleges-following-easing-covid-19>
